

Inclusionism is the notion that:
 All people have intrinsic value.
 All people derive their value from interaction with each others.
 All people are owed equity in the value that is created from our interaction.

	Libertarians	Inclusionists	Left-Wingers	Right-Wingers
What is Citizenship?	personhood means: all self aware beings with desires and plans for the future, should be considered citizens with the right to life.		Limited Human-Racism: "humanness" determines citizenship, but not for embryos.	Religious Human-Racism: "Humanness" determines citizenship.
How to engage Employment?	If the government avoids meddling (unemployment, insurance, minimum wages, etc) all workers will find new jobs, even if at lower wages.	Embrace the end of labor: the wealth and leisure created by automation should be shared equitably by all through a basic income guarantee, shorter work week, and new types of work.	Protectionism, luddism, public employment: attempt to protect existing jobs, and create new ones.	Eco Luddism "Small Is Beautiful": Stop automation and adopt voluntary simplicity.
How to think about Globalization?	Economic globalization is good: Global governance, worker protections, and environmental laws are all unnecessary.	Economic globalization must be accompanied by political globalization: globalization is good as long as it is accompanied by workers rights and protections, environmental laws, and global democratic governance of capital flows.		Eco Luddite: Globalization should be stopped and we should return to self-reliance and political sovereignty. Religious Global Bans on enhancement tech but no other global governance.
How to support the Ecology?	Free Markets: the market can solve all ecological problems.	Technogaian: A combination of judicious regulation and ecologically oriented technologies can prevent and remediate ecological damage. Openness to the cautious use of geo-engineering as a partial mitigation of climate change is an example of a technogaian approach.	Left Ecology: technologies developed by patriarchal, capitalist systems need to be banned and those system changed.	Deep Ecology: Humanity should radically restrict itself. Religious Dominion Theology: Man has stewardship over Nature.
How to engage Reproductive Rights?	Procreative Liberty: Trust parents to act in children's best interests, and let them buy germinal choice in the market.	Procreative Liberty, Equality and Beneficence: Trust parents to act in children's best interest, stop them if they don't, give them equal access to germinal choice technology, and encourage them to create children with the best life opportunities.	Limited Procreative Liberty: Reproductive rights, but not extended to germinal choice and reproductive technology.	Procreative Liberty Trumped by Religious Rights: Reproductive rights trumped by religious prohibitions or the need for radical population reduction.
How to engage Technological Enhancement?	Market Access and Legal Equality is Enough: If legal equality is guaranteed and enhancement technological are available in the market, social equality is irrelevant and government should do nothing to create a more equal society.	Make Enhancements Universally Accessible: Democracies should work toward social equality, and provide universal access to enhancement technologies.	Bans on technologies as Part of Larger Egalitarian Program: Democracies should work toward social equality and ban enhancement technologies.	Tech bans Necessary to Protect Equality: Equality can be guaranteed by banning enhancement technologies.
Individual Liberty vs Restrictions	Individual Liberty overrides "yuck factor". You can't legally "yuck" my "yum".		Yuck Factor: overrides individual liberty in germinal choice and biotech, but not in sexuality or abortion	Yuck Factor: overrides individual liberty.
Humanism vs Religious Right	Humanism: Human beings are free to determine their own future, guided by prudent reason. There are no obvious natural or divine limits on human aspiration.		Opposition to Patriarchal or Imperialist Humanism	Deep Ecology / Hubris Taboo: Humanity should be restricted by divine or ecological taboos.
How to consider Technological Risks?	Resignation: technology is uncontrollable, government intervention always has bad unforeseen consequences, and risks are manageable without government.	Regulation: risks are manageable with the assistance of democratic oversight and management.	Relinquishment: Risks are so enormous and unknowable, and regulatory institutions so flawed, that human enhancement should be banned.	Relinquishment: Risks are so enormous and unknowable, and regulatory institutions so flawed, that human enhancement should be banned.
